# MEETING

We carried out our regular weekly meeting this week on 30/10/2022 and we have done what can be summarized as follows:

- Discussed technologies used in the version controlling system (GitHub) to improve the general layout of the project like
  - Husky
  - Commitlint Commitizen (cz)
- Discussed opening an issue for each feature as we develop the project

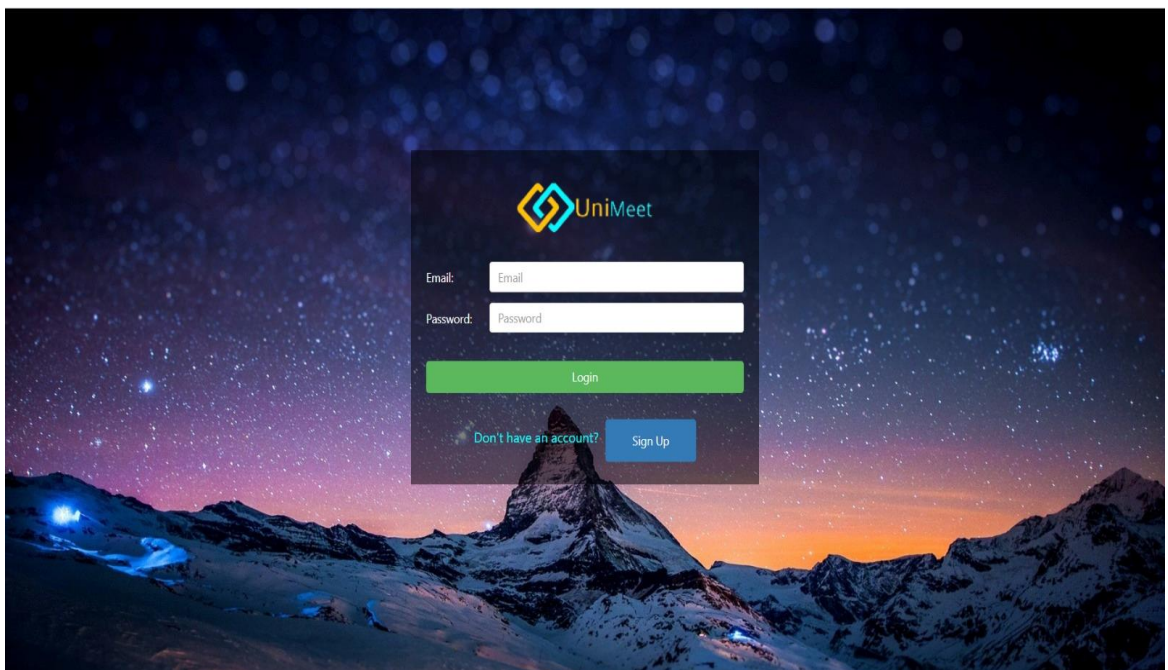

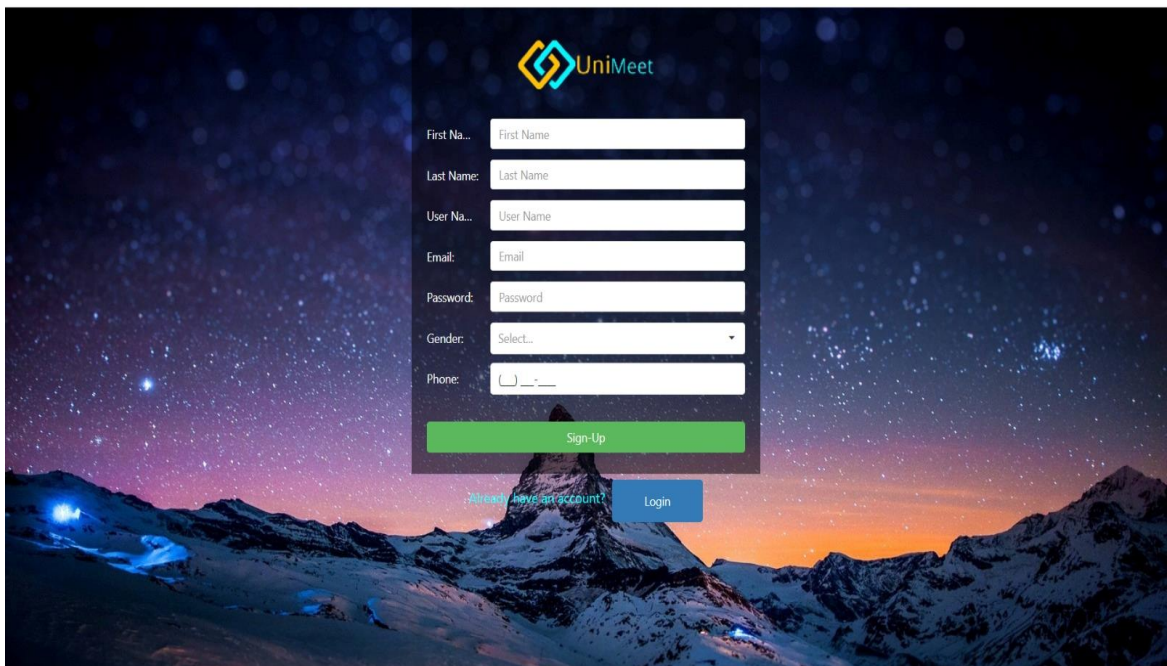

The screenshot shows the GitHub Issues page for the repository. The search bar contains the query "is:issue is:closed". There are 15 labels and 0 milestones. A "New issue" button is visible. The issues list shows two open issues:

Issue	Labels	Assignee	Sort
login page responsive refactor #3 by Ertaayten was closed 5 hours ago	in-progress, refactor, ui	[Avatar]	1
create sign up page in web client #1 by EmreCanCakir was closed 6 hours ago	feat, in-progress, ui	[Avatar]	1

- Discussed the database design for the project like
  - Proper entities
  - Relationships between the entities
  - What should and shouldn't be on the database
- Discussed the edits that will be performed on the general design of the project

## Individual works

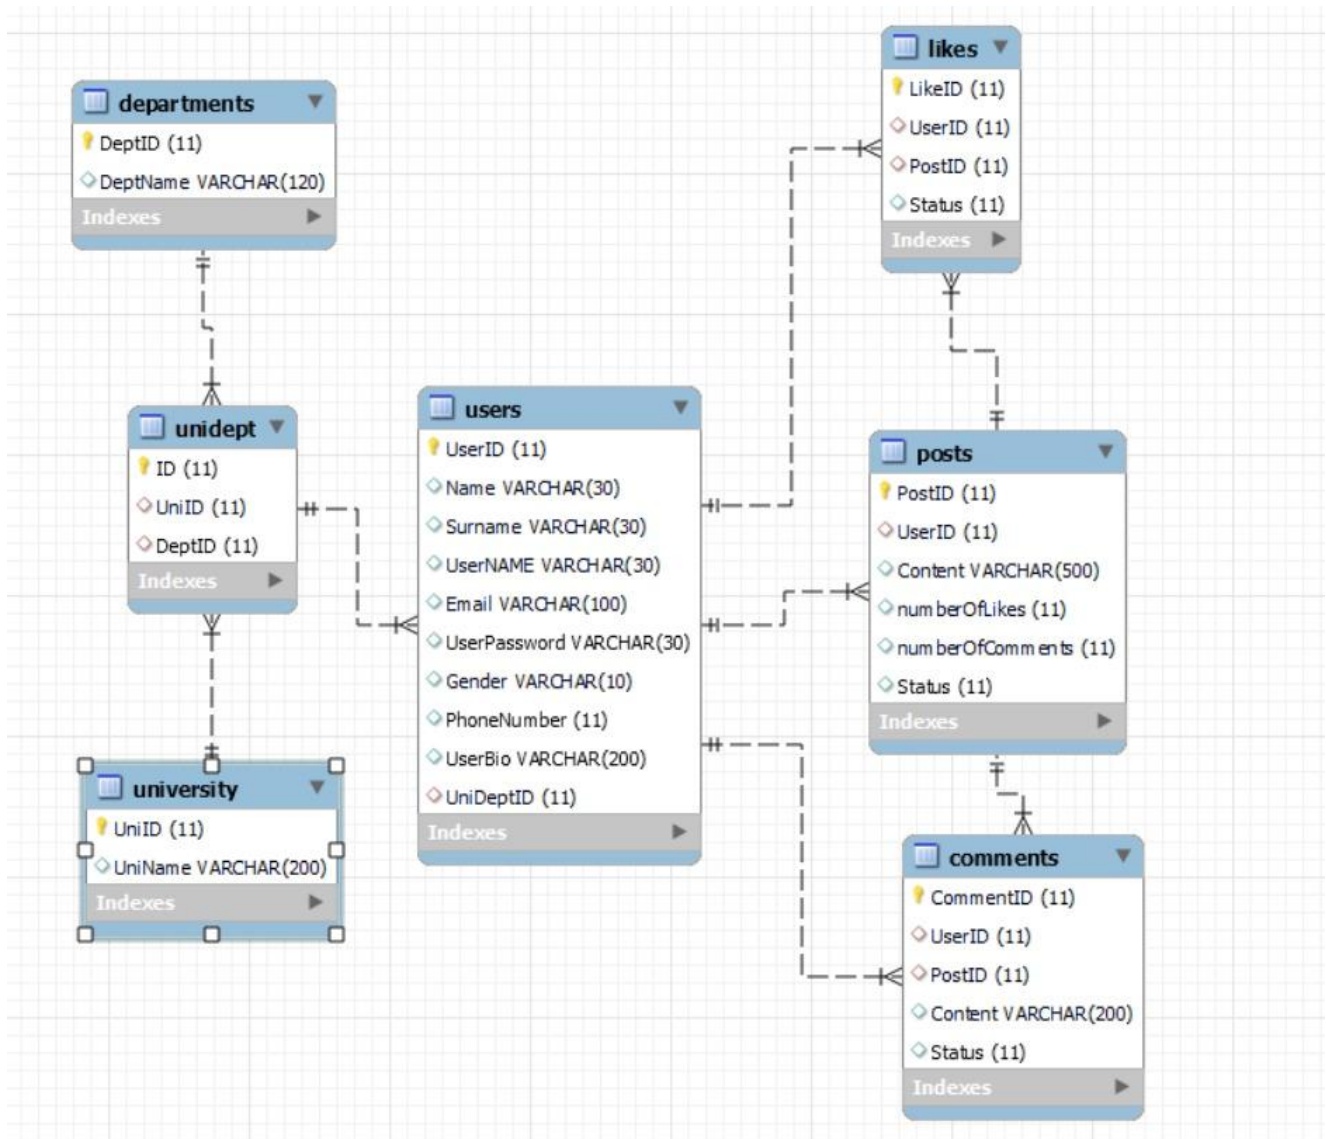

- Emre & Ayten :

We add sign up page design, input fields validations also added. Added project logo to Login page and sign up page. Finally improved responsivity of the pages Added issues according to the login page and sign up page changes in GitHub.

- Kadir and Ismail: **a draft design of the database design.**

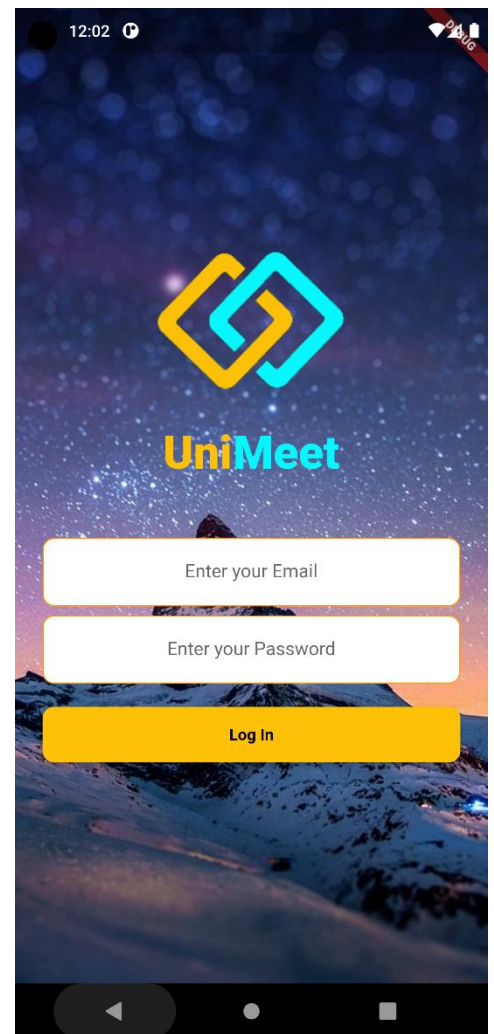

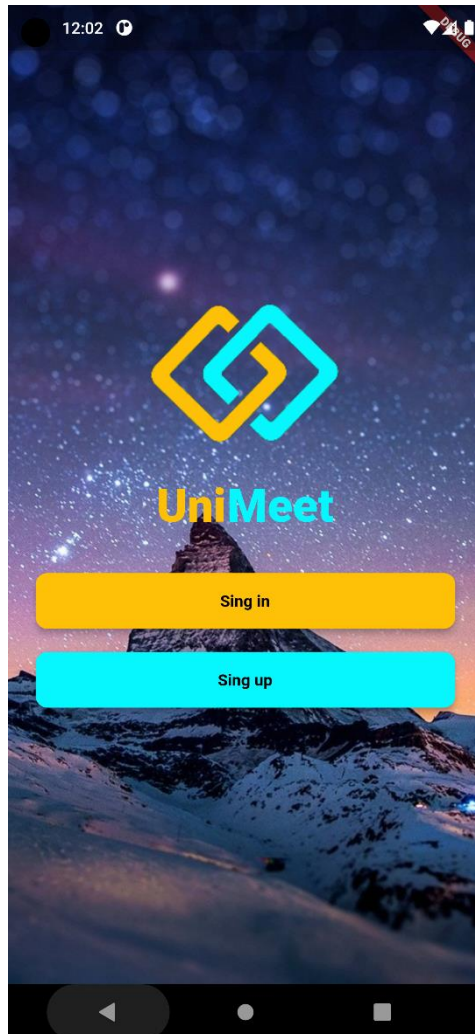

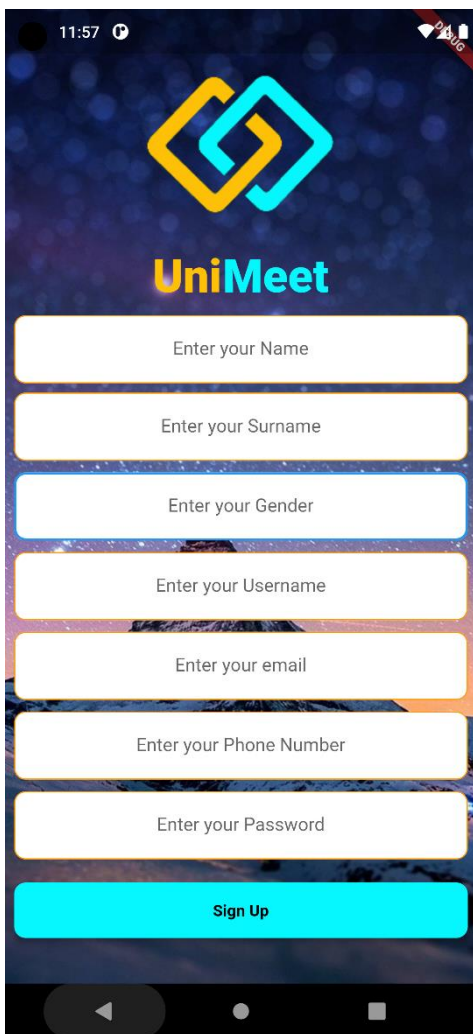

We added unidept table and We connected to users table as foreign key  
And We add likes, posts and comments table

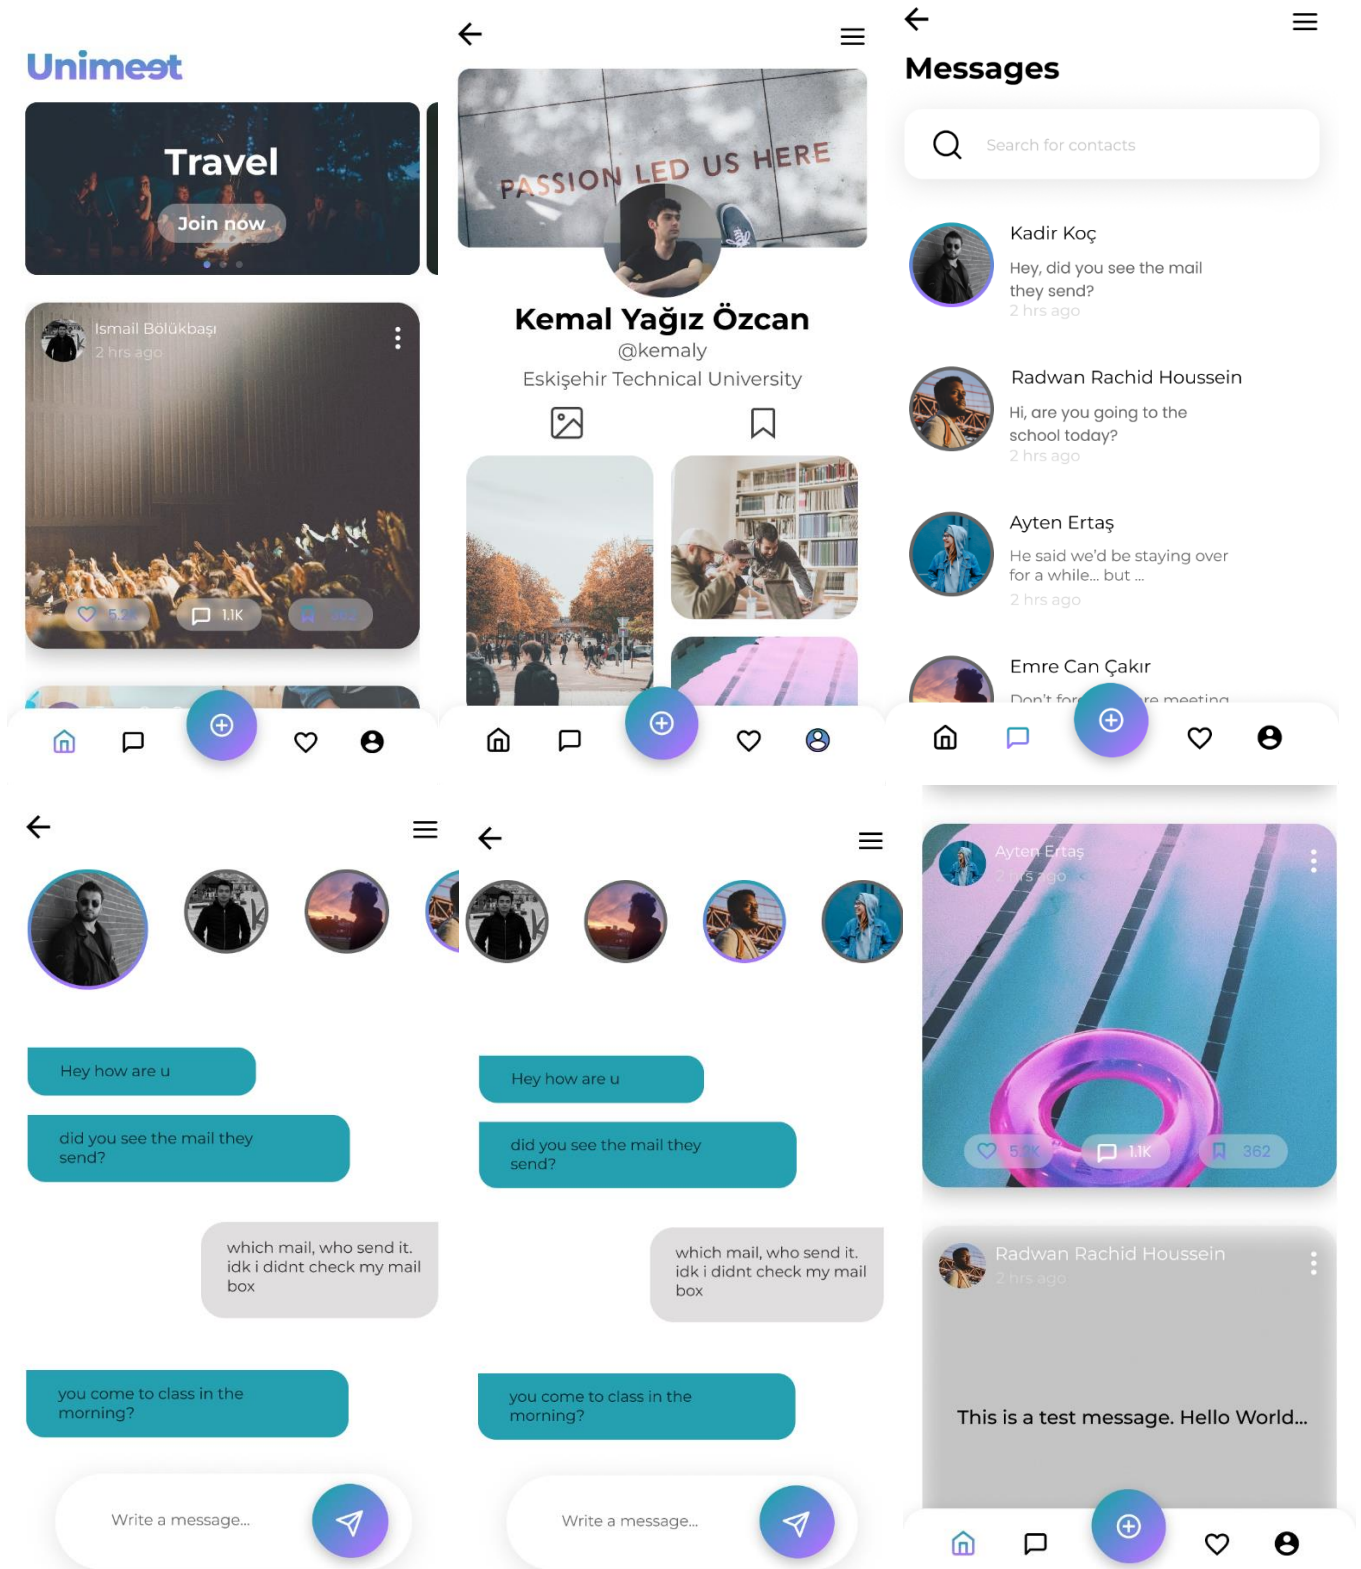

- **Radwan :**

In this week as the mobile dev, beside preparing the report and taking part in the discussions and design decisions, I tried to match the background and some other details from the frontend team, although I'm not convinced with the current layout of the UI but it's just a sketch for now since we haven't received the final layout from our designer we're working on it to reach the best final design we can put on the table.

- **Kemal:**

Applying what I have learned in the past 2 weeks, I designed the possible general UI of the application which will be applied to the project bit by bit on the following weeks.

## **Plans for the Following Week**

In the following week we'll take the next steps and work on number of improvements including (but not exclusively):

- Will make some general UI designs of the general appearance of the project
- Backend development will be carried on
- Design post page interface for web and mobile
